

World Zoonosis Day marks the anniversary of the first vaccination against a zoonotic disease. On July 6, 1885, Louis Pasteur, a French scientist, successfully administered the first vaccine for zoonotic disease.

World Zoonosis Day educates people about the risks and impacts of zoonotic diseases on human and animal health. 60% of known infectious diseases and 75% of emerging infectious diseases are zoonotic, according to the World Health Organization (WHO).

Zoonotic diseases are illnesses that can be transmitted between animals and humans. These diseases can be caused by bacteria, viruses, parasites, or fungi.

ECO CLUB Celebrates World Zoonoses Day on 6<sup>th</sup> July 2024 to spread awareness about Zoonotic Diseases. Members of the club gave information on Prevention of spread of Zoonotic Diseases, Managing threats for Future Infections and Framework for preparedness for disease.
